PRECAUTIONS:

1) All the connections should be tight and clean.
2) Source voltage should not exceed the rating voltage of the load.
3) Current taken by the load should be within the safe limits of the capacity of the source.
4) The zero error of the instrument should be removed before taking the readings.
5) All the readings should be noted carefully.
6) Experiments should be performed with great care.

CONCLUSIONS:

- What you have learnt from this experiment.

SUGGESTIONS TO IMPROVE THE LAB WORK

- How can be improved lab work of this experiment?
